

Annex C.1: Publication of aggregated information related to the D-2 common grid model

Date of the change-request: 22nd January 2012

Target date for implementation: before Go-live

Related to paragraph 10.4 ("Publication of aggregated information related to the D-2 common grid model" of the approval document dated 1st August 2014 the following changes will be implemented:

1. Publication daily ex-post at D+2 (instead of monthly ex-post).
2. Publication of the best forecast Net Positions for BE, DE, NL, FR for every hour (ex-post at D+2). These best forecast Net Positions are the total Net Positions of each country, and not only the CWE Net Positions.

Example:

Business day	Timestamp	Vertical load				Generation				Best Forecast NPs			
		BE	DE	FR	NL	BE	DE	FR	NL	BE	DE	FR	NL
18-12-2013	10:30:00	10004	43577	66161	12978	10712	54239	69279	12545	-2000	-1000	3000	5000

Since the information of non-CWE borders is not based on best forecast, this information (i.e. Refprog) will be published separately on the CASC website. (see next paragraph).

3. Additional publication:

Refprog Bilateral exchanges on the CWE-borders and the following non- CWE borders for every hour (ex-post at D+2, netted values (i.e. value can be negative)): AT=>CZ, AT=>HU, AT=>SI, BE=>NL, BG=>TR, CH=>AT, CH=>DE, CH=>FR, CH=>IT, CZ=>SK, DE=>AT, DE=>CZ, DE=>NL, DE=>PL, ES=>MA, ES=>PT, FR=>BE, FR=>DE, FR=>ES, FR=>IT, GR=>AL, GR=>BG, GR=>IT, GR=>RS, GR=>TR, IT=>AT, IT=>SI, PL=>CZ, PL=>SK, RO=>BG, RO=>HU, SI=>HU, SK=>HU, RS=>AL, RS=>BG, RS=>HU, RS=>RO, RS=>SI, UA=>HU, UA=>RO, UA=>SK
