

## **DAY-AHEAD COORDINATED CROSS-BORDER CAPACITY CALCULATION ON THE ITALIAN NORTHERN BORDERS**

### **FULL LIVE TEST LAUNCH ON 03.02.2016**

*2016, January 13*

Following the communication on the same subject published on 2015 December 1<sup>st</sup> and on December 9<sup>th</sup> on JAO web site, the Transmission System Operators of the Northern Italian Borders inform market participants that the Full Live Test of the day ahead coordinated capacity calculation process will start on February 3<sup>rd</sup> as delivery date.

Since Swissgrid announced the tense situation expected in winter for their electrical system, ad-hoc assessments have been performed, in the context of grid security, in order to investigate the possible impact of the day-ahead procedures and results on the scenarios expected for the Swiss system.

As a result, the Transmission System Operators of the Northern Italian Borders concluded that the robustness of day ahead coordinated NTC calculation process is confirmed and therefore agreed to launch the Full Live Test phase.

Furthermore, the Transmission System Operators of the Northern Italian Borders inform market participants that all the local regulatory approval procedures, where applicable, have been successfully concluded.

The duration of the Full Live Test is expected to be no shorter than two months.

The effective Go-live date will be announced with proper advance notice in the course of the Full Live Test.
