

Dear Market Participants,

TenneT TSO B.V. would like to inform you that the F_{\max} rates (thermal limits of the overhead lines) of Dutch lines have been set to the “Summer” regime from the delivery day 01/03/2016 at 8 am (market coupling day 29/02/2016) until 20/11/2016.

In the enclosed file (“Fmax changes_TTB_20160301.xlsx”), you will find the F_{\max} variation of each Dutch CBCO (with the corresponding fixed ID numbers). The F_{\max} variation is calculated from the former Winter rates as follow:

$$\frac{\text{Summer } F_{\max} - \text{Winter } F_{\max}}{\text{Winter } F_{\max}}$$

Best regards

TenneT TSO B.V.
