

DAY-AHEAD COORDINATED CROSS-BORDER CAPACITY CALCULATION ON THE ITALIAN NORTHERN BORDERS

GO LIVE on 08.06.2016

2016, June 1st

Following the communication on the same subject published on 2016 January 13 on JAO web site, the Transmission System Operators of the Northern Italian Borders inform market participants that the Full Live Test of the day ahead coordinated NTC calculation can be considered successfully concluded. Indeed, the full live test demonstrated that the new daily computed NTCs are suitable for operation by TSOs.

In this light, the process is ready to switch to go live on June 8th as first delivery date.

Participating TSOs inform that at this stage the daily calculation process will be used for allocation purposes in import direction to Italy only. NTC values in export direction from Italy will be added in a later stage, once their computation methodology will be finalized.
